**9 Evaluating a new approach to strong web cache consistency with snapshots of collected content** Mikhail Mikhailov, Craig E. WillsMay 2003 **WWW '03: Proceedings of the 12th international conference on World Wide Web**

Publisher: ACM

Additional Information: [full citation](#), [abstract](#), [references](#), [cited by](#), [index terms](#)  
Full text available:  [pdf\(115.46 KB\)](#)

The problem of Web cache consistency continues to be an important one. Current Web caches use heuristic-based policies for determining the freshness of cached objects, often forcing content providers to unnecessarily mark their content as uncacheable ...

Real-time procedural shading was once seen as a distant dream. When the first version of this course was offered four years ago, real-time shading was possible, but only with one-of-a-kind hardware or by combining the effects of tens to hundreds of rendering ...

## 11 The evolution of Coda

 M. Satyanarayanan  
May 2002 **ACM Transactions on Computer Systems (TOCS)**, Volume 20 Issue 2  
**Publisher:** ACM

Additional Information: [full citation](#), [abstract](#),  
Full text available:  [pdf\(441.35 KB\)](#) [references](#), [cited by](#), [index terms](#)

Failure-resilient, scalable, and secure read-write access to shared information by mobile and static users over wireless and wired networks is a fundamental computing challenge. In this article, we describe how the Coda file system has evolved to meet ...

**Keywords:** Adaptation, Linux, UNIX, Windows, caching, conflict resolution, continuous data access, data staging, disaster recovery, disconnected operation, failure, high availability, hoarding, intermittent networks, isolation-only transactions, low-bandwidth networks, mobile computing, optimistic replica control, server replication, translucent cache management, weakly connected operation

## 12 WebExpress: a client/intercept based system for optimizing Web browsing in a wireless environment

 Barron C. Housel, George Samaras, David B. Lindquist

The graphics processor (GPU) on today's commodity video cards has evolved into an extremely powerful and flexible processor. The latest graphics architectures provide tremendous memory bandwidth and computational horsepower, with fully programmable vertex ...
